

For Tulsa Engineer February 2010 Issue

By Matt Norris

Fab Lab a Perfect Fit for Small Business

Tulsa Engineer is running a series of monthly articles on the efforts of local Tulsa volunteers to open a public MIT fabrication laboratory (Fab Lab) in the Kendall-Whittier Neighborhood. This month's article briefly describes how inventors, entrepreneurs and small business can access and benefit from Fab Lab Tulsa.

As Oklahoma's only open community resource for rapid prototyping, invention, conferencing, training and philanthropy, Fab Lab Tulsa is the perfect source for small business innovation. Lab services are not only directed toward the public for free access, but are also targeted to entrepreneurs and inventors who need 3D Printing prototypes, a new place to meet with clients, professional development hours or training space for employees. Fab Lab business members can reserve exclusive access to the lab to insure that their intellectual property is protected. Two business memberships have been created to cater to different needs and philanthropic resources. Whether for fun or profit, Fab Lab Tulsa serves Tulsa as Oklahoma's only resource for open innovation. Fab Lab Tulsa...Tulsa's preferred business partner.
